```

V

This protein comprises an N-terminal the daunomycin C-14 hydroxylase (see

modified enzyme derived fr AAW36128) of Streptomyces

from es sp.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1331 GGTGGCCGTCGACCCGTTCGCGTGTCCCATGATGACCATGCAGCGCAAGC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   strain C5. It is encoded by a gene construct (see AAV01452) in plasmid pANT199. In this plasmid, the doxA gene (see AAV01447) is translationally fused with a leader sequence encoding 6 histidine residues so that the fusion protein can be affinity purified on a nickel-agarose gel. Daunomycin C-14 hydroxylase is a P450-like enzyme capable of converting daunomycin to the anticancer agent doxorubicin. Host cells, especially Streptomyces host cells, transformed with pANT199 can be used in methods for the production of doxorubicin from daunomycin or for the hydroxylation and oxidation of other anthracyclines.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This protein comprises the daunomycin C-14 hydroxylase (DC14H) of Streptomyces sp. strain C5. DC14H is a P450-like enzyme useful for the production of doxorubicin from daunomycin, and for the caid sequence was deduced from the doxA gene (see AAV01447) cidentified in the daunomycin biosynthesis gene cluster from C5 (see CC AAV01453). Plasmid vectors (see AAV01451-52) have been constructed cfor use in the recombinant production of DC14H in transformed host CC cells. Claimed methods for production of DC14H in transformed host CC cuse of a host microorganism transformed with a plasmid which contains the doxA gene; incubating a culture of Streptomyces sp. CC contains the doxA gene; incubating a culture of Streptomyces sp. CC strain C5 with daunomycin; and incubating DC14H with daunomycin. The methods of producin from 13-deoxydaunomycin and darmomycin from 13-deoxydaunomycin. The methods preclude the use of halogens as crequired in the current chemical methods.
                                                                                                                                                                                                                                                                                                                                                                                               Align seg 1/1 to:

This protein is the encoded product of the Streptomyces sp. strain C5 daunomycin biosynthetic gene cluster orfa (see AAV01453). This gene lies upstream of the doxa (see also AAV0147) gene. The doxa gene codes for daunomycin C-14 hydroxylase (see AAW36128), an enzyme capable of converting daunomycin to the anticancer agent doxorubicin. Host cells, especially Streptomyces host cells, transformed with plasmids (see AAV01451-52) containing the doxa gene can be used in methods for the production of doxorubicin from daunomycin or for the

                                                                                                                                                                                                                                                                This sequence represents the dnrU gene product from the microorganism Streptomyces peucetius. The invention relates to a recombinant microorganism which produces doxorubicin (DoR), in which at least 1 daunorubicin (DaR) metabolism gene selected from dnrU and dnrX, has been inactivated. The microorganism is preferably S. peucetius wMH1658, WMH1654 and WMH1662. The function of the DaR gene is inactivated by insertion of a gene (preferably neomycin/kanamycin resistance gene aphII) into the daunorubicin metabolism gene. The blocking of the function of
                                                                                                                                                                                                                                                                                                                                                                                                                          Production of doxorubicin and daunorubicin - using a recombinant daunorubicin producing microorganism in which at least one dnrU or dnrX metabolism gene has been inactivated

This gene lies upstream of orfA and doxA (see also AAV01447). The doxA gene codes for daunomycin C-14 hydroxylase (see AAW3612B), an enzyme capable of converting daunomycin to the anticancer agent doxorubicin. Host cells, especially Streptomyces host cells, transformed with plasmids (see AAV01451-52) containing the doxA gene can be used in methods for the production of doxorubicin from daunomycin or for the hydroxylation and oxidation of other anthracyclines.

```

This sequence represents a partial dnrV gene product from the microorganism Streptomyces peucetius. The invention relates to a recombinant microorganism which produces doxorubicin (DRR), in which recombinant microorganism which produces doxorubicin (DRR), in which at least I daunorubicin (DRR) metabolism gene selected from dnrU and dnrX, has been inactivated. The microorganism is preferably S. peucetius wwH1658, wwH1654 and wWH1662. The function of the DRR gene is inactivated by insertion of a gene (preferably neomycin/kanamycin resistance gene aphII) into the daunorubicin metabolism gene. The blocking of the function of at least one gene of DRR metabolism can increase DRR and DOR production levels and cause the disappearance of baumycin-lke products resulting in DAR and DOR secretion directly into the culture medium.

Disclosure; Fig 2A-B; 48pp; English.

The products can be used in the production of anti-tumour compounds

C;Comment: This protein is length polymorphic. Individuals may have between 21 and 1: partial repeats. The repeat shown is defined by SmaI nuclease sites. C;Comment: Serine and threonine residues in the tandem repeat domain are extensively C;Comment: For an alternative splice form without a tandem repeat domain, see PIR:S4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A;Experimental source: gastric carcinoma cell R;Zrihan-Licht, S.; Baruch, A.; Elroy-Stein, O.; Keydar, I.; Wreschner, D.H.
